

Grado en Ingeniería Informática

Cabecera informática

Informative Diptych

This bachelor's programme is accredited by the European Assurance Network for Informatics Education (EQANIE) via the National Agency for Quality Assessment and Accreditation (ANECA) and holds the Euro-INF international quality label.

Euro-INF _Certificado-Informatica

The Bachelor's Degree in Computer Engineering aims to train expert IT professionals, providing them with a comprehensive background on the technology that allows them to analyse, design, develop and install computer systems, among others, under different working environments and conditions, thus being able to adapt to any change, development or innovation.

The programme trains students in the skills required to become a computer technical engineer, as stipulated in the University Council Agreement of 13 March 2009 (BOE 4/8/2009).

Computer engineers are in high demand from companies in Spain and abroad, with work available almost as soon as you graduate.

The Bachelor's Degree in Computer Engineering at the University of Jaén allows students to choose between three computing specialisations: software engineering, information systems and information technologies.

You will also be able to take advantage of the University of Jaén's unique cross-disciplinary training programme and the activities offered in connection with this bachelor's programme to improve your personal development and professional prospects.
